

# Tele Portal for Service Request / Warranty registration

In the consumer durable market, warranty repairs and service requests are two important measurement parameters which spell out the performance of a product and customer satisfaction. Many a times it is the difficulty in registering with a company and locating the service center that become the biggest problem.

Webyfy has designed an IVR system for the customer of a specific brand to have a single system for warranty registrations, service requests etc. The callers can be appropriately routed to the specific menus and provided for or get information. The caller details and service requirement / product specifics can be sent to the respective service centers. They in turn will contact the customers for in-situ repairs or as stipulated.

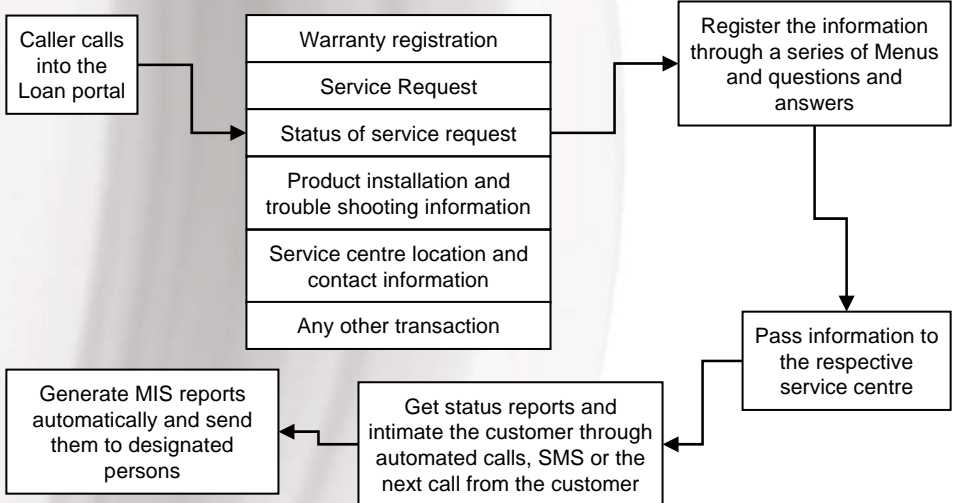

A company needs to have only one such facility in a geographical location catering to a large population. This enhances the effectiveness by consolidating all service information and monitoring the effectiveness of the service centers centrally. The data for customer satisfaction measurement automatically evolves.

The system is designed to cater to the following functionalities:

1. Accessible over the telephone 24 X 7 with out any interruption in the language selected by the caller. (No restriction in the number of languages that can be used.)
2. Register the new products to avail warranty.
3. Register for any warranty repairs or any other service requests.
4. Get information about the operation of the equipment.
5. Get information about the service centers and their contact details.
6. Request a demo of the product or assistance to make the product operational.
7. Status of the service or repair request posted.
8. Automatically send the caller information along with specifics of the request to the service center demarcated according to defined geographical boundaries.
9. Get information about the status of request and intimate the customer either on the next call from the customer or by SMS or an automated call to the customer.

The process flow (on the reverse page) gives the details of the process to register a service request for an appliance selected from a group according to a specific hierarchy. This is a part of the large Tele-Portal system and is provided to give an idea about how the entire system works.

## Schematic of a Tele-Portal for Service Request / Warranty registration

# Service Request for Appliance Repair/ Service
